

# SIMPLE SAVER SYSTEM®

## The Simple Saver System provides the solutions needed in your aircraft facilities.

Your aircraft hangar will protect the investment of millions of dollars of aircraft, equipment, and tools. It will be considered a safe haven for storage and a secure location to provide maintenance and repairs to equipment. Our goal is to assist in securing your aviation investments in an area not subject to the unforgiving elements of nature and providing an energy efficient facility.

The Simple Saver System strives to be the best insulation system on the market to address the everyday challenges in aircraft hangars throughout the country. The System provides:

- Full, uncompressed installed R-values of insulation.
- Lower monthly energy costs (and up to 50% reduction in HVAC equipment).
- Reduction in opportunities for birds to nest in the roof and walls inside the facility. Thousands of dollars may be saved by eliminating bird droppings on state-of-the-art equipment.
- Allowing high salaried maintenance staff to focus on maintaining equipment versus struggling with bird pests and insects.
- A washable, finished appearance that eliminates dust and dirt build-up on purlins and girts, reducing the time, money and frequency of cleaning the building.
- A bright and clean interior requiring fewer light fixtures (light reflectivity up to 85%).
- Better acoustics with higher sound absorption (75% noise reduction).
- Free leading edge OSHA compliant fall protection for erectors and installers.
- Free design-build energy analysis sales materials.

The Simple Saver System will increase the value of aircraft facilities by protecting the investments inside the facility as well as the building itself. Whether you are trying to eliminate a pest problem, protect your investments, reduce maintenance cost or save on energy costs, the Simple Saver System can be relied on to deliver as it has for thousands of building projects over the last 25 years.
