

SIMPLE SAVER SYSTEM[®]

The Simple Saver System provides critical energy solutions for fire and EMS facilities.

Your emergency services facility will protect the investment of hundreds of thousands of dollars in trucks, ambulances, equipment, and tools. It will be a safe haven for training and a secure location for PPE, maintenance and storage of specialized equipment. Our goal is to assist in protecting your investments and providing an energy efficient facility that will showcase the best your community has to offer.

The Simple Saver System strives to be the best insulation system on the market to address the everyday challenges in emergency services buildings nationwide. The System provides:

- Full, uncompressed installed R-values of insulation.
- Lower monthly energy costs (and up to 50% reduction in HVAC equipment).
- Shorter payback period than other insulation products or methods.
- Reduction in opportunities for birds to perch in the roof and walls inside the facility, reducing the chances of bird droppings on hose beds and emergency lightbars.
- A washable, finished appearance that eliminates dust and dirt build-up on purlins and girts, reducing the time, cost and frequency of cleaning the building.
- Better heat recovery time after bay doors open and close in cold climates.
- A bright, polished interior requiring fewer light fixtures (light reflectivity up to 85%).
- Better acoustics with higher sound absorption (75% noise reduction).
- Free leading edge OSHA compliant fall protection for erectors and installers.
- Free design-build energy analysis sales materials.

The Simple Saver System will increase the value of emergency vehicle facilities by protecting the investments inside the facility as well as the building itself. Whether you are trying to reduce noise reverberation, protect your vehicles, reduce building maintenance costs or save on future energy bills, the Simple Saver System can be relied on to deliver as it has for thousands of building projects over the last 25 years.
