

**TECHNICAL BULLETIN 023:
USING SYSEAL® STICKY TAPE AS A FABRIC LINER-TO-STRUCTURE ADHESIVE**

The Simple Saver System® has not been tested for fall protection using Syseal® Sticky Tape (double-sided tape) as a sealant for the fabric liner to the top of the rafters in a new construction environment. As long as the rafters are clean and dry, the Syseal Sticky Tape should be able to sufficiently adhere the fabric liner to the overlying structure. Thermal Design accepts no liability for any damage or injury resulting from using Syseal Sticky Tape instead of recommended Simple Saver Sealants as a fabric liner-to-structure adhesive.
