

**TECHNICAL BULLETIN 023:  
USING SYSEAL® TAPE AS A LINER FABRIC-TO-STRUCTURE ADHESIVE**

The Simple Saver System® has not been tested using Syseal® Tape (double-sided sticky tape) as a sealant for the liner fabric to the top of the rafters in a new construction environment. As long as the rafters are dry, the Syseal Tape should be able to sufficiently fasten the liner fabric to the overlying structure, however Thermal Design accepts no liability for any damage or injury resulting from using Syseal Tape instead of glue as a liner fabric-to-structure adhesive.
