

**TECHNICAL BULLETIN 023:  
USING SYSEAL® TAPE AS A FABRIC LINER-TO-STRUCTURE ADHESIVE**

The Simple Saver System® has not been tested fall protection using Syseal® Tape (double-sided sticky tape) as a sealant for the fabric liner to the top of the rafters in a new construction environment. As long as the rafters are clean and dry, the Syseal Tape should be able to sufficiently adhere the fabric liner to the overlying structure. Thermal Design accepts no liability for any damage or injury resulting from using Syseal Tape instead of glue as a fabric liner-to-structure adhesive.
